Common Authentication for All APIs

Required Parameters Values for Member		
1	Login User ID	Same used for Member Desk Login
2	API Secret (PWD)	API Credentials provided by NSE
3	API Member License KEY	API Credentials provided by NSE
4	Member Code	Member code registered with NSE

Common Authentication & Authorization Logic

1. Every Member user who has access to Member Desk can access API.
2. User ID would be same as used for Member Desk.
3. IP Address must be validated against User (Need to whitelist your IP with NSE)
4. Role based access invalidated for each API. (i.e. If user cannot access Client Registration Entry module, then Client Registration API is not accessible to respective user.
5. Authentication parameters must be passed as request header
6. If the login is not successful, then error code "403 FORBIDDEN" will be sent with error Message "Invalid authorization header or IP Address not mapped with user."
7. If the login is successful, then proceed for actual API Business Logic processing.

Request Headers			
Sr No.	**Header Name**	**Type**	**Value/ Remark**
1	Content-Type	varchar	application/json
2	memberId	INT	1
3	Authorization	**BASIC**	base64(Login User ID: Encrypted Password)

Generate Encrypted Password		
Generate Encrypted string of the provided: (API Secret (PWD)|<RANDOM Number>)		
Encryption Algorithm	AES 128 bit	
Key	API Member License KEY	

Non-Confidential

For eg.
========

salt = random alphanumeric value (eg. 9A1c74744b944d9bd34e7de3a964fb19)

iv = random alphanumeric value (eg. 90E9c0485bc76e864e5aae05a34d356f)

plain_text = API Secret (PWD)|<RANDOM Number>

eg. 90E9c0485ty54g864e5aae05a34d356f|34533412321

aes_encrypted_val = AES128(salt, iv, <API Member License KEY>, plain_text)

Encrypted Password = base64(iv::salt::aes_encrypted_val)

Sample Error Response JSON
